

Patent Application of Jason Egbert and Jeff Egbert for “Weighted Exercise Vest with Webbing Pockets, Attached Hydration Pack and Body Cooling System”

Page 7

CLAIMS –WEIGHTED VEST WITH HYDRATION PACK, WEBBING POCKETS AND BODY-COOLING SYSTEM

We claim a weighted vest with an attached hydration pack, webbing pockets and/or one or two insert able cooling material packs inside compartments located front and back inside the weighted vest, is new and novel.

More specifically, we firstly claim a weighted vest with an attached hydration pack. We further claim a weighted vest to include a hydrating pack to be attached to the weighted vest by any means feasible, either by hook and loop fasteners, stitching, clipping by means of metal or plastic-type fasteners, and/or any other suitable method. It is understood that we claim no specific method of attaching a hydrating pack to a weighted vest.

Secondly, we claim a weighted vest with webbing pockets to hold weights is novel, because the webbing pockets greatly extend the useful life of a weighted vest, where the weight creates substantial forces inside the pocket, resulting in a condition in which the weight pockets can become damaged and worn in part due to repeated abrasion, thus reducing the useful life of the weighted vest to the wearer.

Thirdly, we claim a weighted vest featuring insert able, freezable cooling packs which can be frozen and inserted inside compartments in the front and back of a weighted vest to keep the wearer cool during physical exertion. Compartments are provided inside the front and back of the weighted vest in to which freezable materials can be inserted to provide a cooling effect to the body of the wearer.
